What is claimed is:

5

10

1. A nucleic acid purification method wherein

a nucleic acid capturing tip incorporating the solid phase containing a nucleic acid capturing agent is used to allow said solid phase to capture a nucleic acid and to extract the nucleic acid,

said nucleic acid purification method characterized in that washing solution is fed in the tip containing the solid phase capturing said nucleic acid unidirectionally from the head to the end.

- 2. A nucleic acid purification method according to Claim 1 wherein the flow path leading to said nucleic acid capturing tip is provided with a branch of a washing solution flow path where a washing solution is supplied.
- 3. A nucleic acid purification method according to Claim 1 further characterized in that a special-purpose flow path is provided to lead a washing solution into said nucleic acid capturing tip.
- A nucleic acid purification method according to
 Claim 1 further characterized in that air is sent into said flow path.
 - 5. A nucleic acid purification method according to Claim 1 further characterized in that discharge of washing solution and feed of air are repeated alternately.
- 25 6. A nucleic acid purification apparatus wherein a

nucleic acid capturing tip incorporating the solid phase containing a nucleic acid capturing agent is used to allow said solid phase to capture a nucleic acid and to extract the nucleic acid,

said nucleic acid purification apparatus

characterized in that washing solution is fed in the tip

containing the solid phase capturing said nucleic acid

unidirectionally from the head to the end.

20

- 7. A nucleic acid purification apparatus according to Claim 6 wherein the flow path leading to said nucleic acid capturing tip is provided with a branch for a washing solution flow path and a means to supply washing solution is provided.
 - 8. A nucleic acid purification apparatus according to Claim 6 characterized in that a special-purpose flow path is provided to lead a washing solution into said nucleic acid capturing tip.
 - 9. A nucleic acid purification apparatus according to Claim 6 characterized in that a means is provided to send air into said flow path.
 - 10. A nucleic acid purification apparatus according to Claim 6 characterized in that a means is provided to repeat discharge of washing solution and feed of air alternately.
- 25 11. A nucleic acid purification apparatus wherein a

nucleic acid capturing tip incorporating the solid phase containing a nucleic acid capturing agent is used to allow said solid phase to capture a nucleic acid and to extract the nucleic acid,

5

10

15

said nucleic acid purification apparatus comprising;

- (1) a nucleic acid capturing tip incorporating the solid phase containing a nucleic acid capturing agent,
- (2) a liquid suction/discharge movable nozzle in contact with said nucleic acid capturing tip in a removable manner,
- (3) a treatment solution capable of storing a mixture between the substance to promote capturing of nucleic acid by said solid phase and sample containing nucleic acid,
- (4) a means for feeding washing solution into the tip containing the solid phase capturing said nucleic acid unidirectionally from the head to the end,
- (5) a means for supplying eluent to said nucleic acid capturing tip,
- (6) a top removing means for removing said nucleic

 20 acid capturing tip from said liquid suction/discharge
 movable nozzle subsequent to discharge of eluent from said
 nucleic acid capturing tip to a purified product vessel,
 and
- (7) a purified product vessel to receive purified25 nucleic acid products.
